

# Primary Engineer Programmes

## Information for Engineers

Primary Engineer brings together teachers and engineers to engage primary and secondary pupils with engineering via curriculum mapped projects. The aim is that engineers will provide the context for the projects and enable pupils and teachers to understand more about the diversity and excitement of engineering.

### Teacher Training & Help in the Classroom

The aim of inviting you on the training course is to introduce you to schools you will be linked with. Whilst each engineer has varying amounts of time they can devote to helping the schools, it's between the engineer and the school to agree what this support should look like.

The teachers will deliver the project to whole classes of pupils, and the engineers would act as the expert in the room: the link to the wider world of engineering. The courses are practical, building exemplar models, exploring teaching resources and discussing challenge activities to be run at the end of the project.

Not all engineers who wish to be involved can attend the training day but they are still welcome to link to schools - Primary Engineer will help link engineers to schools who are registered and provide all the introductions necessary.

If you are unable to support the schools directly, there are alternative ways in which you can get involved...

### Judge at a Celebration Event

We host celebration events where students compete against each other with their finished models. For this activity we require engineers who have not worked with schools. [Click here](#) to see photo's of previous Celebration Events!

### Be interviewed for The Leaders Award

The Leaders Award for STEM is an annual award open to Primary and Secondary pupils. It gives pupils the chance to meet and interview engineers and professionals from different fields in STEM, like yourself. From this experience, they write up a report and submit it to us for entry into the award. Visit [www.leadersaward.com](http://www.leadersaward.com) for more information.

### What's your benefit?

As support of these activities can be counted towards the UK required competencies for progression within your chosen institutions, we will forward you an evaluation form allowing you to save and record your activities for future reference.
